

## **Frigostamp s.r.l.**

*Frigostamp s.r.l.*

## **PA wall panel**

The PA panel of injected polyurethan satisfies any construction requirement and guarantees a good insulation capacity even with low thicknesses thanks to its PVC joint that interrupts the thermal bridge and sensibly lowers the condensation.

This panel is used as well in refrigeration (coldrooms with positive working temperature, seasoning rooms) as in the building industry(external walls)

The PA panel can be cladded with galvanized, painted, pvc coated steel sheet, AISI 304, painted, pvc coated stainless steel, fibreglass and aluminium.
