PSI-PSD wall panels

The panels are injected with polyurethan foam and used for the fitting of coldrooms. There are different insulation thicknesses, PSI have a single and PSD have a double tongue and groove joining.

This kind of polyurethan joint guarantees a perfect insulation, eliminates all thermal exchange and creates a continuity with the polyurethan of the core of the panel and the other panels.

The panel can be cladded with galvanized, painted, pvc coated stainless steel sheet, painted, pvc coated stainless steel, glassfiber and aluminium sheet.
